ABSTRACT

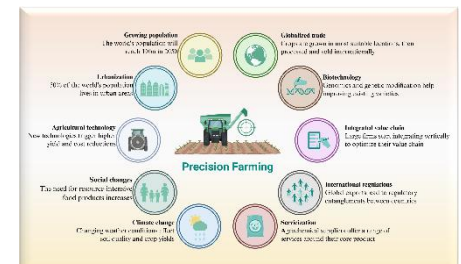

Unsustainable Farming is Damaging the Environment

The current methods of farming involve the use of a number of chemicals, such as fertilizers, and a large quantity of water. However, this creates a number of negative consequences for the environment.

Farmers Lack Practical Digital Guidance

Despite the availability of sustainable farming practices, many farmers lack the opportunity to access practical digital guidance on how they should apply the practices based on their crops, land conditions, and climatic conditions.

Lack of Motivation to Shift Toward Sustainable Practices

It is not an easy task to change traditional practices in agriculture. Without any form of motivation, reward, and progress monitoring, people tend to stick to their traditional practices rather than adopting alternative sustainable practices.

No Platform that Connects and Encourages Farmers

There exists no engaging digital platform that enables farmers to learn sustainable practices, monitor their progress, share their experiences with other farmers, and be motivated through various challenges and rewards.

TEAM DETAILS

TEAM NAME: Nexor

TEAM	NAME	Year of study	College/ University	Contact number
LEADER	Vasanth M	II	Sri Eshwar College of Engineering	9566859053
MEMBER 1	Surya T K	II	Sri Eshwar College of Engineering	9095157527
MEMBER 2	Yokesh G	II	Sri Eshwar College of Engineering	6369866640
MEMBER 3	Saravanaguhan CM	II	Sri Eshwar College of Engineering	9360054607
MEMBER 4	ThamilSelvan	II	Sri Eshwar College of Engineering	6380702606
MEMBER 5	Vignesh J	II	Sri Eshwar College of Engineering	8148296014
